Fibrelite gain better control of their finances with Exchequer from IRIS Enterprise Software

Fibrelite is the global market leader in GRP underground technology for petrol stations and was the first company in the world to design and manufacture a composite access cover, specifically for forecourt applications.

The organisation has three sites, one in the UK, one in the USA and one in the Far East. Fibrelite has 70 employees and an £8.4 million turnover, which combined with an extensive global distribution network, makes managing finances a complex task.

Fibrelite previously used Pegasus Opera DOS, but found the system was inflexible and didn't offer enough history.

Jacqui Preston, Financial Director, at Fibrelite comments, "It was high time we moved to a more sophisticated and flexible financial management solution. Exchequer offered many advantages including the stock tree feature within the Stock Control module, which lets us move products, whilst retaining their history. The OLE Save feature is also vital to us because we can save data from Microsoft Excel and write it back into Exchequer for budgets, price lists and reporting."

Deans Computer Services, an Exchequer Reseller provided Fibrelite with a 13 user Exchequer system, that went live in June 2004 using Exchequer Financials running as one company with different cost centres. The organisation also opted for additional modules including Sales & Purchase Order Processing and Paperless, which lets them send out documents and reports in a secure read-only format by fax or email at the click of a button.

The Sales & Purchase Order Processing module gives Fibrelite total flexibility in fulfilling their customers' requirements whilst providing an unparalleled level of traceability. Whether Jacqui and her team require a simple process involving order taking, picking, delivering and invoicing; or a more complex procedure involving multiple locations, routing, packaging, labelling, serial number allocations and back-to-back processing - this module has the built-in functionality to provide maximum productivity.

"We have much better control and visibility over our finances since adopting Exchequer", concludes Jacqui. "We can drill-down to any level, giving us full historical data on any financial period. The paperless functionality saves us time and money, as we are not manually sending out invoices, statements and remittances anymore."
