

Secure Smarter:

8 Cyber Security Services to Protect What Matters

Introduction

Why Cyber Defence Matters

Cyber attacks don't just target big corporations, they target everyone. One weak spot in your security can open the door to data theft, system disruption, or serious financial loss.

At a time when threats are growing in both volume and complexity, protecting your business isn't just about ticking boxes, it's about taking action.

That's where this checklist comes in. We've broken down **eight key services** from Pentest People that help keep your systems, data, and people safe. It's clear, practical, and designed to give your business (and your customers) confidence.

No jargon. No unnecessary detail.
Just what you need to know and do.

1. Vulnerability Scanning

Spot weaknesses before criminals do.

Our automated scanning tools identify known security flaws in your external and internal systems, so you can fix them before they become a real problem.

Ongoing scans for
peace of mind

Simple reports highlighting
what needs action

Helps you stay ahead
of emerging threats

2. Penetration Testing

Think like a Hacker to Defend like a Pro

We simulate real-world attacks on your systems to uncover vulnerabilities a basic scan might miss. It's a hands-on way to test your defences and improve them.

- + Tailored tests based on your systems
- + Clear, risk-rated findings
- + Fix recommendations you can actually use

3. Web Application Testing

Keep your websites and apps locked down.

Your online platforms are often the first thing attackers try. Our experts dig deep into your web apps to spot weaknesses like insecure code or exposed data.

Covers login areas, data input fields, and more

Protects customer and company information

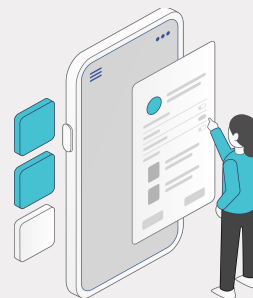

Supports compliance with data protection laws

4. Mobile App Testing

Security that fits in your pocket.

If your business uses or develops mobile apps, you need to be sure they're safe. We test iOS and Android apps for common flaws like insecure storage and data leaks.

Real-device testing, not just emulators

Tests both the app and the backend

Keeps users and data secure

5. Cloud Security Review

Confidence in Your Cloud Setup

Cloud platforms like Microsoft 365, AWS and Azure come with powerful features but also risks. We assess your cloud configurations to ensure you're making full use of security controls.

- + Focused on misconfigurations and overexposed data
- + Helps you secure remote working setups
- + Supports compliance with Cyber Essentials and ISO 27001

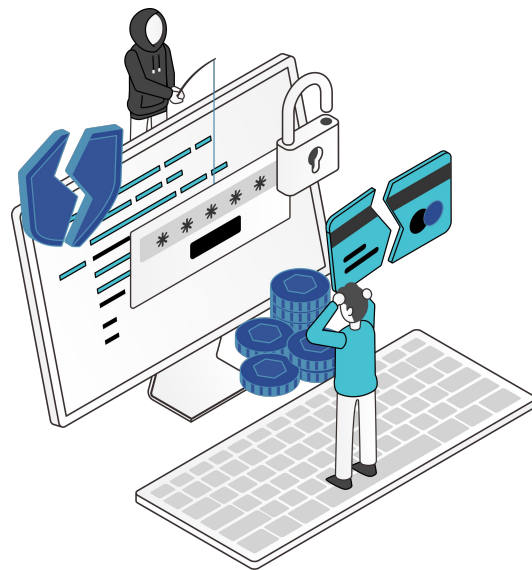

6. Social Engineering Testing

Test your people, not just your tech.

Most breaches happen because of human error, think phishing emails or fake calls.

We simulate these scenarios to test your staff's awareness and response.

- + Focused on misconfigurations and overexposed data
- + Helps you secure remote working setups
- + Supports compliance with Cyber Essentials and ISO 27001

7. Red Teaming

A Full-Scale Security Challenge

This is the most realistic test of your defences.

Our Red Team acts like an advanced attacker, trying to access your systems over weeks, not days.

**Simulates a
targeted
cyber attack**

**Tests both
technical and
human defences**

**Ideal for organisations
with more mature
security needs**

8. Incident Response Planning

Know what to do if the worst happens.

Even with strong defences, no system is invincible. We help you create a clear, tested plan so you can respond quickly and recover confidently from any incident.

**Covers login
areas, data input
fields, and more**

**Protects customer
and company
information**

**Ideal for organisations
with more mature
security needs**

Why These Services Matter

These eight services form the foundation of a robust, modern cyber defence strategy.

Together, they help you:

- Prevent common cyber threats
- Detect weaknesses early
- Respond faster to incidents
- Build trust with customers and partners
- Strengthen compliance with frameworks like Cyber Essentials and ISO 27001

Next Steps: Let's Talk

Whether you need a one-off test or full, ongoing protection, we are here to help. Our experts work alongside your team to make cybersecurity simple, effective, and aligned to your goals.

We'd love to help you choose the right mix of services for your business.
