KEY FACTORS

- EXTEND THE LIFE OF YOUR STORAGE
- UK BASED DATA CENTRES
- TIER 3 SECURITY
- AFFORDABLE MONTHLY PLANS
- REDUCED ONGOING RUNNING COSTS

WHAT IS AMBER VAULT ARCHIVE?

Amber Vault Archive allows you to keep your data sizes manageable by archiving off historical data that no longer needs to be accessed to the cloud. We will store a copy of your data in cold storage in two secure UK data centres where it will be protected with the highest levels of both physical and operational security for your peace of mind.

Surveys report on average up to 50% of the data companies hold has not been accessed in over 12 months. This data is commonly stored on expensive primary storage targets such as enterprise level arrays and servers. Identifying and archiving unused data to the cloud means this data will no longer be taking up space on your primary storage which could extend the life of your server and mean you don't have to purchase costly disk upgrades.

If you wish to access your archived data again simply let us know and we can provide it to you on a suitable media or via an encrypted online transfer.

WHY CHOOSE US?

- **Quality** – Not all clouds are created equal! Our platform is built exclusively on enterprise-level HPE hardware so you can be sure your data is in safe hands.
- **Approachability** – We are passionate about problem-solving and whilst we love talking technical, we also believe in simplicity and will work with you to find the right solution for your business.
- **Security** – An aspect commonly overlooked when dealing with cloud providers, our platform spans 2 Tier 3 UK based data centres with all data encrypted to military-grade standards.
- **Support** – Support is where we shine. Our fully managed services come backed by our team of 16 highly skilled engineers.
