

OperacheCK

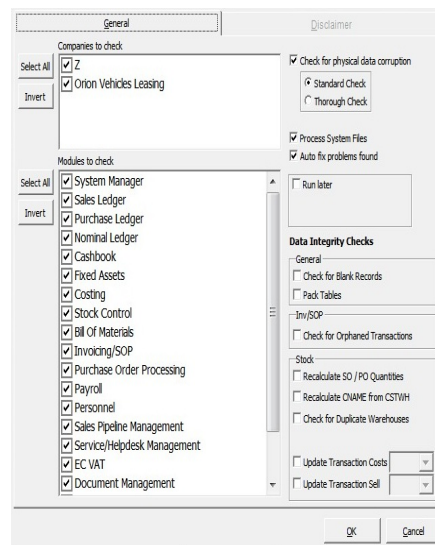

Product Overview:

OperacheCK is a data checking and repairing utility written by CK Systems to give you the peace of mind that your Pegasus Opera data is sound at all times. This utility can be run at any time and will automatically detect and repair many of the data problems sometimes encountered when running Pegasus Opera. Some of these problems can sit there undetected until the month end routines are run and by then it can be too late to restore to a backup thus incurring a costly data fixing visit by a software engineer.

OperacheCK deeply searches all Pegasus Opera data and system databases (optionally by company and by module) and reports any physical data corruptions to you the user. The auto-fixing feature fixes many common data, memo and index corruption problems that can occur within Pegasus Opera (i.e. Error 15, Error 26, Error 41) and a full audit trail is produced for your records. There is also a timed verification routine that may be selected for overnight or off-peak data file checking.

Key Functionality:

- ✔ Quick and easy to use– a true 'click and fix' solution with no user knowledge or interaction
- ✔ Peace of mind against corrupt Pegasus Opera data – checks and repairs errors in all modules including any bespoke installed on the system.
- ✔ Peace of mind against corrupt Pegasus Opera data – checks and repairs errors in all modules including any bespoke installed on the system.
- ✔ Runs independently of Opera
- ✔ Can be run for individual companies, modules and system files with both standard and thorough data checking options available
- ✔ Recalculate stock header balances and remove duplicate stock warehouses
- ✔ Remove blank data records
- ✔ Timed option available to minimise downtime
- ✔ A full audit trail is generated upon completion

End User Pricing:

Software Cost: **£690 +VAT**
AMC: **£230 +VAT per annum**

Note: The Pegasus Opera Toolkit must be present on the system.
