# AV BACKUP

## The world-class cloud backup solution that fits all your business needs

When it comes to choosing a cloud backup provider there are a myriad of options on offer but what should you be looking for? There are number of points that you need to consider before making the leap and trusting another company to look after your data.

**Who will look after your data?**

**Do they provide compression and encryption?**

**What level of monitoring and support do they offer?**

**With Amber Vault your data will be securely stored off-site in a UK Tier 3 Data Centre**

**Monthly subscription**

**Reliable, cost-effective with fast implementation**

Backs up a complete image of your virtual servers in the cloud that can be restored in a handful of mouse clicks. Suitable for any company running a virtualised server infrastructure with a requirement for an off-site backup

**AV BACKUP**

**AV LITE**

Ideal for backing up critical data such as an accounting program or laptops containing important company data. Cost effective to ensure that no company should be without an offsite copy of their business-critical data.

With data sizes increasing exponentially year on year, free up space and extend the life of your servers by migrating your historical data to the cloud.
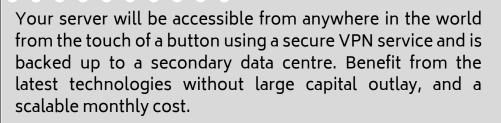

**AV ARCHIVE**

**AV 365**

Scheduled daily backup of your whole Office 365 tenant, including all your mailbox data, SharePoint site and OneDrive for Business files. Quick and easy to restore your whole organisation or a single e-mail or document.

**Business class managed and monitored cloud backup for your entire server infrastructure**

Scheduled replication of virtual servers to the cloud which can be switched on instantly in a disaster situation. Failover provides instant connectivity to your business network via an automatic site to site VPN or an external dial in VPN if your office has suffered a disaster. Operations will switch back to your normal server once it's available.

**AV REPLICA**

**AV HOSTED**

Your server will be accessible from anywhere in the world from the touch of a button using a secure VPN service and is backed up to a secondary data centre. Benefit from the latest technologies without large capital outlay, and a scalable monthly cost.

Our advanced pro-active monitoring system provides multiple metrics, storing 365 days of detailed logs and reports to ensure your system remains in perfect health. Any potential issues automatically alert our support department who are ready to respond and resolve them quickly.

**AV MONITORING**

**SUPPORT**

Our cloud servers are fully managed and maintained by our team of highly skilled and experienced support engineers who will work with you to transition your business applications to the cloud. Ongoing support is also included. We work hard to ensure our platform is secure and all our cloud servers will benefit from the latest in security patches to ensure your data is safe.
